SUMMARY OF AUDIT

TECHNICAL DETAILS

| | |
|-----------------------------|---|
| Audited Project: | Gambler Shiba – (AGS) |
| Source Code: | https://arbiscan.io/address/0x1c7f32699ff9163f928089c0a4d6e5ad5885c6f#code |
| Solidity File: | GamblerShiba.sol |
| Security Audit Date: | 2023-01-04 |
| Revisions: | Initial audit 2023-01-04 |
| Auditing Methods: | Automatic review + manual review |

AUDITING METHODS AND VALIDATIONS

Evaluation objective for the security audit:

- Smart contract code quality assurance check
- Security issues and vulnerabilities deep code evaluation
- Use-case specifications validation
- Best practice smart contract code compliance
- Documentation, project specifications and comments

The contract is checked for possible vulnerabilities and issues. Recommendations may be made for code improvements where severe or medium issues are found:

- | | |
|--------------------------------|---------------------------------|
| • Dependence transaction order | • Gas efficiency check |
| • Reentrancy issues | • Logical oversights |
| • Time dependency | • Access control |
| • Integer overflow | • Centralization issues |
| • Integer underflow | • Logic-specification |
| • Mishandled exceptions | • Contradiction |
| • Call stack limits | • Functionality duplication |
| • Unsafe external calls | • Malicious contract behavior |
| • Number rounding errors | • Abusable functions |
| | • Potential DoS vulnerabilities |

The code review conducted for this audit follows the following structure:

1. Review of the specifications, documentation and commenting provided by the project owners regarding the functionality of the smart contract.
2. Automated analysis of the smart contract followed by manual, line-by-line analysis of the smart contract.
3. Assessment of smart contracts alignment with the documentation and comments when compared to its functionality.
4. Assessment of the code against best practices.
5. Recommendations for code improvements where severe or medium vulnerabilities are found.

SMART CONTRACT DETAILS

| | |
|--------------------------------------|---|
| Contract ID: | 0x1c7f32699ff9163f928089c0a4d6ee5ad5885c6 |
| Blockchain: | Arbitrum |
| Language Used: | Solidity |
| Compiler Version: | v0.6.12+commit.27d51765 |
| Blockchain Scan Verification: | 2022-11-04 |
| Type of Smart Contract: | ERC20 Token |
| Optimization Enabled: | Yes – 200 runs |
| Number of Interfaces: | 3 |
| Number of Contracts: | 4 |
| Number of Libraries: | 3 |

SUMMARY OF AUDIT RESULTS - **PASSED**

LayerOne Cloud (Pty) Ltd smart contract audit for Gambler Shiba (AGS) is marked as PASSED without severe issues on the logic and functions of the contract.

Review of the documentation, description of the projects use-case and the contract, reveals that it follows the line of good practice. It is a clean and default commented contract. There are no severe vulnerability findings in the contract and no concerns about malicious use of the contract functions.

NOTE:

- *Contract owner can change maximum transaction amount.
- *Contract owner is able to whitelist wallets and change limits.
- *Contract is not renounced.

AUDIT DETAILS

SEVERITY OF RISKS AND VULNERABILITIES

| LOW-SEVERITY | MEDIUM-SEVERITY | HIGH-SEVERITY |
|--------------|-----------------|---------------|
| 0 | 0 | 0 |

REPORTED VULNERABILITIES AND ISSUES

No issues or vulnerabilities.

FINDINGS

No medium or severe findings on the contract or noticeable logical issues.

SPECIFICATIONS, DOCUMENTATION AND COMMENTS

The code has a decent number of comments and documentation.

Improving comments in smart contracts using simple, commonly understood terms, helps the userbase understand its functionalities and use-case. Functions in this contract are written to be human readable and easy to understand given a previous knowledge of basic functions and the project goals.

CORRECTNESS OF SPECIFICATIONS

Smart contract follows the functionality that is stated in the documentation and description of the contract. The use-case is also in line what is described about the project.

MANUAL AND AUTOMATED CODE REVIEW RESULTS

Code Audit

Critical: no findings, nothing to worry about.
Major: no findings, nothing to worry about.
Medium: no findings, nothing to worry about.
Minor: no findings, nothing to worry about.
Informational: none

Checks Completed

Gas efficiency check: passed
Contract vulnerabilities check: passed
Reentrancy issues check: passed
Integer over/under flows check: passed
Front running opportunities check: passed
Interface / naming issues check: passed
Order of execution check: passed
Time component check: passed
Blockhash function check: passed
Exception handling check: passed
Third-party integration check: passed
Replay attack check: passed
Short address attack check: passed

ALIGNMENT WITH DOCUMENTATION, COMMENTS AND FUNCTIONALITY

Review of the documentation, description of the projects use-case and the contract, reveals that it follows the line of good practice. It is a clean and default commented contract. There are no severe vulnerability findings in the contract and no concerns about malicious use of the contract functions.

ASSESSMENT OF BEST PRACTICES COMPLIANCE

The contract follows the best practices in majority and there are no concerns from the auditor of any malicious use of the contracts functions. Team is fully verified and interviewed.

RECOMMENDATIONS

None

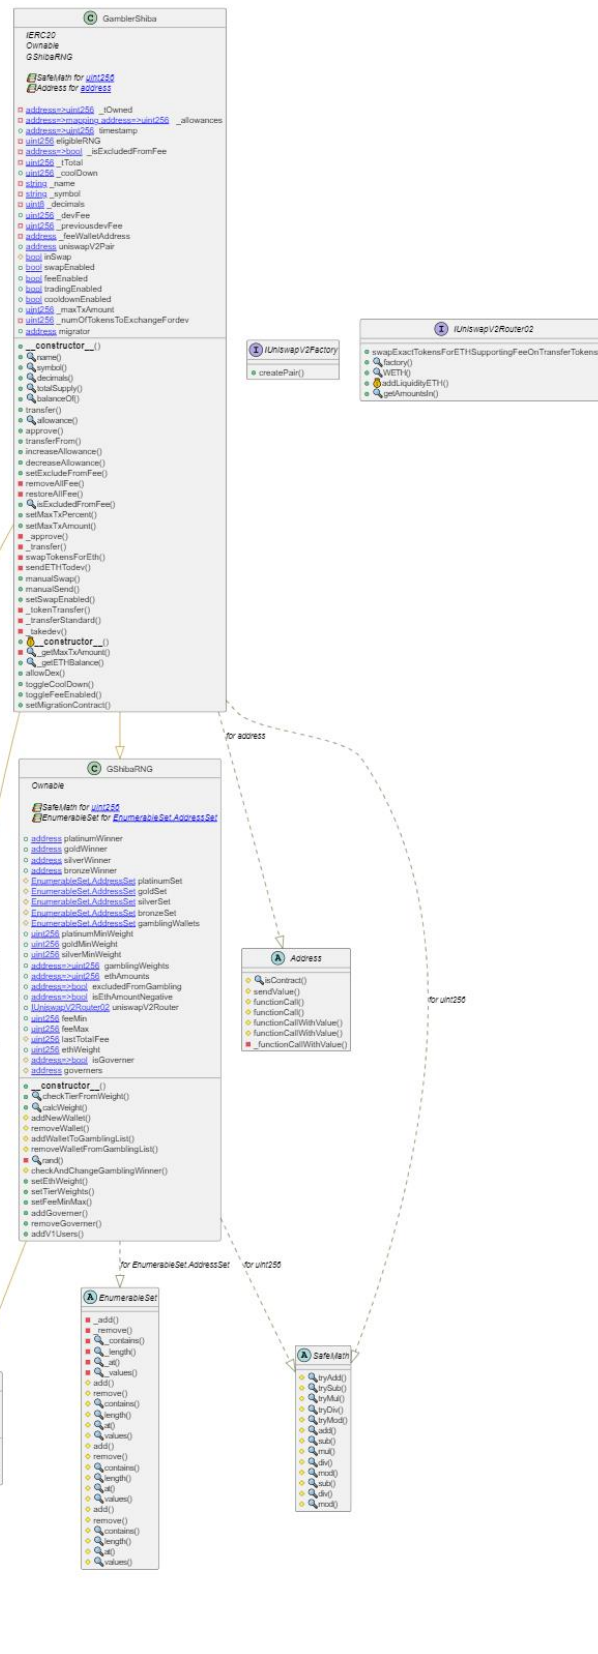

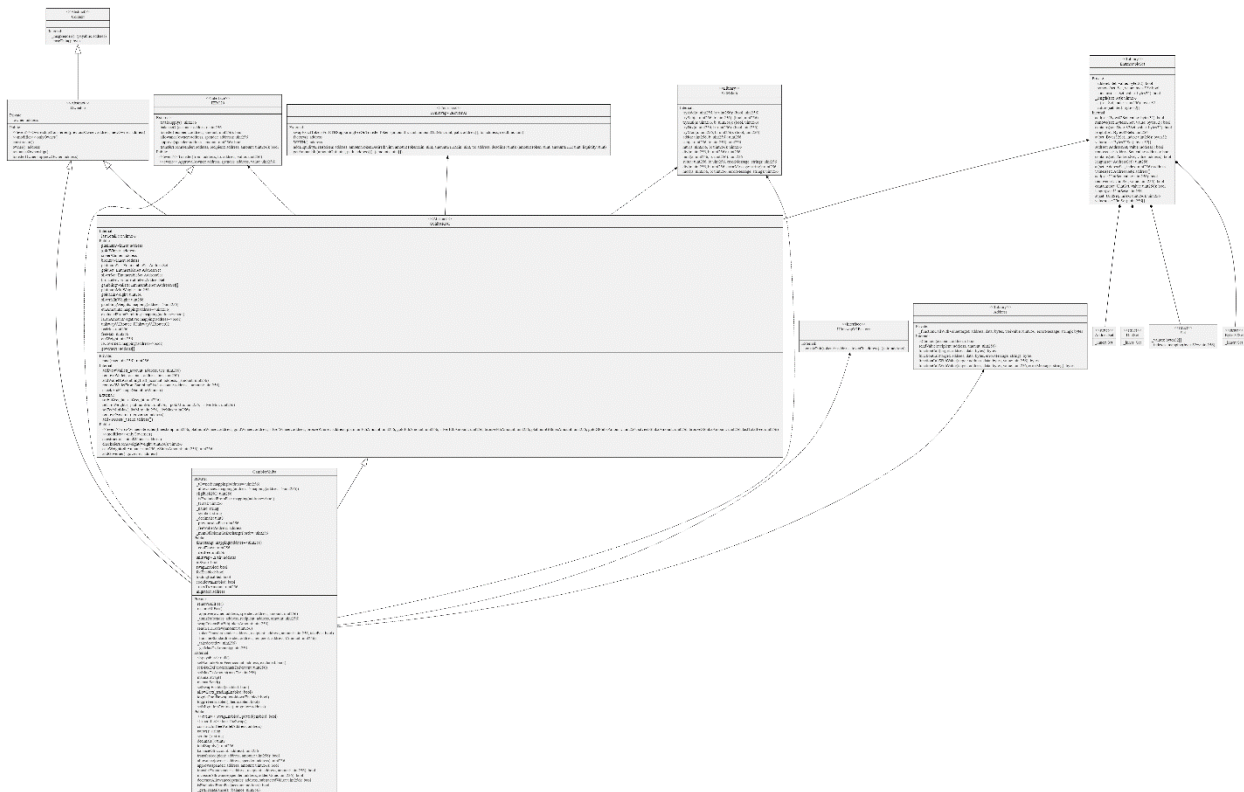

DIAGRAM B – [view online](#)

HISTORY OF REVISIONS

Initial audit was performed 2023-01-04 and there is no need for further revisions of the smart contract. The project team has been informed of a clean audit result.
